

GEA MIXING SYSTEMS

Mix your teat dips on site and produce only as much as you need.

GEA CONCENTRATES

Mix your teat dips and udder washes on site:
less labor, cost and environmental impact

Farming operations are getting bigger and bigger - worldwide. At the same time, the consumption of chemicals is also increasing, mostly in the form of ready-to-use (RTU) products. These products have to be ordered, large storage areas for many canisters have to be provided and stock levels have to be managed. Added to this is the proper disposal of the empty canisters.

This is where GEA Concentrates offer you tangible benefits: they contain the same active ingredients as the RTU products, but far less water. A small but decisive difference that helps you to make your milk production more economical and sustainable:

1. Mix teat dips directly on your farm

2. Mix the dips you currently need

3. Minimize mastitis cases even more effectively...

4. ...and optimize your milk production at the same time

5. Significantly reduce teat dip costs

6. Fewer canisters:
more space in the barn,
less time and effort required

7. Less transportation volume reduces CO₂ emissions

8. GEA Concentrates – your cost-saving and environmentally friendly solution

GEA MIXING SYSTEMS

Efficient solutions for automating your dipping routines

The GEA Mixing Systems offer a seamless solution for farmers to streamline their operations and maximize efficiency. These systems not only eliminate the need for manual mixing or guesswork but also ensure precise and accurate mixing, guaranteeing optimal results. With their plug-and-play functionality, the GEA Mixing Systems are incredibly easy to

install, empowering farmers to produce teat dips directly on their farms, saving both time and resources. By leveraging the convenience and reliability of these systems, farmers can enhance their productivity, maintain consistent quality, and ultimately contribute to the overall success of their operations.

Choose the Mixing System that best suits your farm:

The IntelliBlend Mini is a compact mixing system that is easy to install and use. It is designed to meet the requirements of GEA chemicals and comes with high-precision dosing. The system includes a dedicated controller to ensure proper functioning and a ready-to-use receiver with special level sensors. These sensors ensure that fresh product is always available.

IntelliBlend Mini Version 1

System with one special Dosatron dosing pump, for mixing the udder wash GEA OxyWashPré.

IntelliBlendMini Version 2

System with two special Dosatron dosing pumps, for mixing the iodine teat dips from GEA.
